

Air View of MEDFORD CORPORATION'S Modern, Up-to-date PLANT - - - -

Hello, Lumber Friends! This is "Russ" Hogue, Medford Corp. Sales Manager — ready to bring you an overall, bird's-eye picture of MEDCO'S modern plant.

The mill site covers 165 acres. Logs are brought in by rail and truck and unloaded in the log pond which covers over 10 acres and holds some 3,000,000 feet of logs, or about two weeks' supply.

Mill buildings include the big, well-equipped sawmill with long timber ramp, powerhouse, fuelhouse, waste burner, battery of 18 modern dry kilns, with cooling shed, the big, modern 300,000-ft. daily capacity planing mill, machine shop, six giant dry storage sheds that house over million feet under cover, with covered loading platform where 20 cars can be loaded simultaneously.

The general and sales offices are housed in a separate, modernly equipped, well-lighted office building.

Water for the MEDCO plant is provided by a 6" water main supply system with 75,000-gallon tower water storage tank reserve.

All machine buildings are equipped with an automatic sprinkler system for fire protection. Nothing is overlooked which will add to the productive efficiency of the MEDCO plant or the quality of its diversified Douglas Fir, White Fir, Ponderosa and Sugar Pine products.

That's all we will have time for today. Be sure to listen for the next MEDCO broadcast. Until then, this is "Russ" Hogue signing off from Station M-E-D-C-O.

CHAPTER NO. 21 IN THE SERIAL STORY OF MEDFORD CORPORATION

MEDEORD AND CORPORATION
